

Not in My House - California to Regulate IoT Device Security

October 5, 2018

Topics: [Data Security](#)

On Friday, Sept. 28, 2018, California Governor Jerry Brown signed into law first-in-the-nation legislation requiring that manufacturers include “reasonable security features” on any device that is “capable of connecting to the Internet”—commonly known as an “Internet of Things” (IoT) device. California Assembly Bill 1906 and Senate Bill 327, which contain identical text, won’t go into effect until Jan. 1, 2020, but most manufacturers of IoT devices are going to need that lead time (if not more) to ensure the devices they put out into the market are compliant with the new law.
